

DealVault Demo Agreement

Sample Referral, Proof Record, and Milestone Tracking Agreement

Demo parties

VestBlock Demo Client LLC
Northstar Referral Partners LLC
Apex Milestone Services LLC

1. Purpose

This sample agreement shows how a business can use DealVault to organize an agreement record, attach proof of a document, track referral or payout splits, and follow milestone status in a clean audit trail.

The sample is intentionally fictional. It is designed for sales demos, internal product walkthroughs, and buyer education.

2. Deal record summary

The parties agree to create a DealVault demo record called Demo Agreement Record DV-2026-001. The record may include an internal deal ID, proof ID, timestamp, status, and external reference.

No raw property address, private contract text, personal identity data, bank information, or sensitive business records are intended to be placed on-chain.

Demo record fields

- Demo deal ID: DV-DEMO-2026-001
- Agreement category: referral, proof record, and milestone tracking
- Record status: sample active
- External reference: dealvault-demo-agreement-2026

3. Referral and payout tracking

Northstar Referral Partners LLC is shown as a referral partner for demonstration purposes. DealVault may record payout split names, percentages, approval status, and paid status for operational visibility.

This demo does not move funds, hold escrow, custody assets, guarantee payment, or replace payment processors, title companies, accountants, or legal professionals.

Sample payout split

- VestBlock Demo Client LLC: 70 percent allocation for the demo owner
- Northstar Referral Partners LLC: 20 percent referral allocation

- Apex Milestone Services LLC: 10 percent milestone services allocation

4. Milestone tracking

Apex Milestone Services LLC is shown as a service provider responsible for submitting milestone updates. The demo record may track submitted, approved, disputed, or completed status changes.

Milestone records are for project visibility. They do not guarantee quality, payment, compliance, or completion unless separately agreed in proper written agreements.

Sample milestones

- Milestone 1: Agreement package uploaded for proof
- Milestone 2: Referral split reviewed by parties
- Milestone 3: Service milestone submitted for approval
- Milestone 4: Proof certificate prepared for review

5. Proof record language

For this demo, the PDF agreement is hashed using SHA-256. DealVault stores the resulting hash, proof type, external reference, and timestamp so a viewer can later confirm that the demo file matches the recorded proof.

The PDF contents stay off-chain. Only the document hash and non-sensitive proof metadata are used for the demo proof package.

6. Blockchain proof disclaimer

Blockchain records can help show when a proof event was recorded and what hash was associated with that event. A blockchain proof record does not make an agreement legally valid by itself and does not confirm that all parties had authority, capacity, or required approvals.

DealVault is positioned as proof and workflow support, not escrow, custody, legal representation, brokerage compliance, securities issuance, or guaranteed payout infrastructure.

7. Non-legal disclaimer

This sample is for product demonstration only. It is not legal advice, does not replace legal counsel, title, escrow, brokerage compliance, or required written agreements.
